

Anti-Contaminant Back Sealer

FILAPW10

ALL NATURAL STONE, TERRACOTTA AND ABSORBENT MATERIALS

WHAT IT'S FOR

- Permanently protects tile surfaces from streaks or stains caused by efflorescence.
- Prevents mineral deposits from rising through the substrate and sides to the material surface.
- Specifically created for all natural stone, terracotta and absorbent materials.
- Ideal for floor, stair and wall coverings.

ADVANTAGES

- Eco-friendly: water-based and VOC-free.
- Apply to the back and sides of tiles and slabs in absorbent materials prior to installation.
- Does not form a film and allows material breathability (moisture vapor escapes for proper drying and curing of setting materials).
- Does not affect bonding, in accordance with UNI EN 1348-2009 standards.

HOW TO USE IT

Ready to use, no dilution necessary.

Instructions: Thoroughly clean the back and sides of the tile or slab, removing dust and residue. Apply FILAPW10 evenly to the back and sides of the material using a large, flat paintbrush or airless sprayer. Avoid pooling. Let dry for 24 hours before installing the floor or wall covering.

Caution: Do not apply FILAPW10 on polished surfaces.

Coverage:

1 Liter (1.06 QT)
▶ 107-161 sq.ft. (10-15 m²)
Coverage rates are indicative.

Packaging:

5 Liter (1.32 GAL) 4 plastic bottles per box
